C#, ASP.NET Core, Entity

Framework Core

- Database:

SQLite, SQL basics

- Tools & Concepts:

Git, REST API integration,

Component-based

architecture, Routing,

Services

Languages

- Bosnian / Croatian /

Serbian

- English

ALIJA HODŽIĆ

Software Development Student

About Me

Full-stack developer focused on building modern web applications using Angular, TypeScript, and ASP.NET Core. Experienced in frontend development, REST API integration, authentication systems, and responsive UI design through real-world projects and internship experience. Passionate about clean, scalable, and maintainable software solutions.

Experience

Full-Stack Development Intern — HAA Marketplace Nov 2025 – Apr 2026

- Developed and maintained responsive frontend features using Angular and TypeScript
- Built and integrated RESTful APIs using ASP.NET Core and C#
- Worked with MySQL databases and Entity Framework Core
- Implemented authentication and user-related backend functionality
- Participated in testing, debugging, and deployment workflows
- Collaborated within a small agile engineering team
- Improved application structure through component refactoring and code optimization

Projects

FreelanceHub

- Built a full-stack freelance marketplace using Angular and ASP.NET Core Web API
- Developed responsive UI with Tailwind CSS and integrated REST APIs
- Implemented JWT authentication, role-based dashboards, messaging, reviews, and notifications
- Worked with SQLite, Entity Framework Core, and deployment using Vercel and Render
- [GitHub: github.com/AlijaHodzic/FreelancerMarketplace](https://github.com/AlijaHodzic/FreelancerMarketplace)

MeniSpot — Digital QR Menu SaaS Platform

- Building a multi-tenant digital menu platform for restaurants, cafés, bars, and clubs
- Developed admin and restaurant owner dashboards using Angular, TypeScript, ASP.NET Core, and PostgreSQL
- Implemented QR menu structure, subscription/license management, restaurant branding, product categories, offers, and global drink library
- Added image upload optimization with automatic WebP conversion and resizing
- Deployed application with Docker on a Hetzner VPS using PostgreSQL and reverse-proxy setup
- [GitHub: github.com/AlijaHodzic/MeniSpot](https://github.com/AlijaHodzic/MeniSpot)
